E-Commerce Strategy Consulting

Our approach to strategic change is designed to help clients position their company for future scenarios and realize the promise and potential of E-commerce by integrating business and technology strategies across processes, applications and infrastructure. We help clients aggressively address the following core strategic questions confronting them.

Web Solutions

Web Solutions is all about integration of a design, concept or business initiative on the Internet. For the ones who are stepping in the world of web development it would mean an in depth analysis of your business by our web business consultant to determine which strategy and approach will benefit your company's online presence.

Enterprise Solution Development

Ardor Technology will develop an optimal enterprise software solution with regard to your business needs and costs/productivity statement using our best practices in software development. Our technological expertise includes years of working with Java, J2EE, J2ME, PHP, and other technologies.

iPhone and J2ME Application development

Ardor Technology developers have acquired a new direction in software development, which is custom software development for iPhones. We offer services in development of customized applications for iPhones on the base of the authentic iPhone SDK provided by Apple Inc.

We develop J2ME applications using Mobile Service Architecture (MSA) platform builds on the Java Platform, Micro Edition (Java ME) specifications that have come before it, including the Mobile Information Device Profile (MIDP), Connected Limited Device Configuration (CLDC), and Java Technology for the Wireless Industry (JTWI). As the wireless device market continues to evolve and incorporate new technologies and services

Methodology

In developing our project execution model, we at Ardor technology to the international standards like CMMI-SW to make the project flow easy and transparent for the client. Every project has its 5 stages, which are:

- ✚ Inception
- ✚ Requirements Management
- ✚ Software Solution Development
- ✚ Product Integration
- ✚ Quality Assurance

Inception

This is when the initial requirements collection takes place - our business analysts and software architects will carefully study your requirements to prepare a comprehensive proposal. You do not have to provide us with structured documentation. Just let us know your thoughts and expectations, and our specialists will work on defining all the details by asking you some questions and offering our ideas on your project. The proposal is free for you and has no obligations.

At this stage we will clearly describe your requirements in project documentation. Our specialists will prepare a proposal describing the product's performance, technologies, design features, verification requirements, etc. as well as the estimation of workload and cost of the project.

Requirements Management

The requirements management allows for the activities for obtaining and controlling requirement changes and ensuring that other relevant plans and data are kept current. Requirements management continues all through the project, culminating in the comparison of the product against the requirements.

Software Solution Development

The software solution development is the greatest stage of the project where most of the programming, coding and testing takes place.

Product Integration

At the Product Integration stage we define the best possible integration sequence, integrate product components and deliver the product to the client.

Quality Assurance

Quality Assurance is an essential part of any project, which ensures the top quality of our solutions. This is a complicated process, which takes place at all other stages of the project and includes the following activities:

- ✚ Strong project management
- ✚ Transparent project flow
- ✚ Well-defined requirements and structured project documentation
- ✚ Deep testing, bug-tracking and fixing
- ✚ Process monitoring, product evaluation in regard to the specified requirements and client expectations
- ✚ Usability analysis
- ✚ Confidentiality and Intellectual Property Protection

Fast Communication and Decision Process

Unlike many other large software companies, Ardor Systems keeps internal & external communication efficiency a main priority. This means that our clients are not kept waiting due to bureaucratic issues, commonly found in larger organizations; instead our corporate policy guarantees feedback to your in-inquiry within 24 hours, and during 2 hours in working time.
